

Did you fill it?

Pick a country:

Number of earthquakes in a particular year/range of years?
[Country (string) vs Number of earthquakes (integer)]

Risk map

Cross plots to demonstrate that earthquakes can't be predicted

Risk map

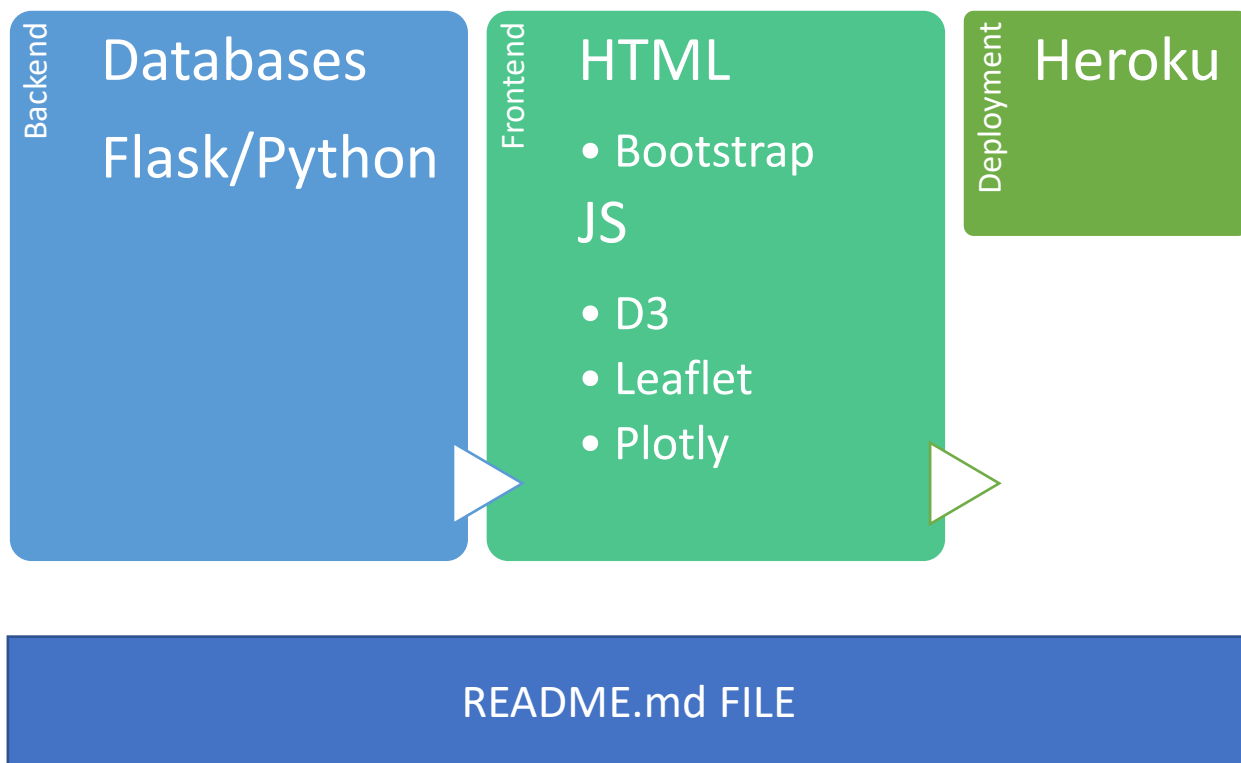

Risk assessment:

- Population
- Low, High, Medium income
- Seismic activity (magnitude and/or frequency?)
 - 3 risk levels:
 - Risk 1: High
 - Risk 2: Medium
 - Risk 3: Low

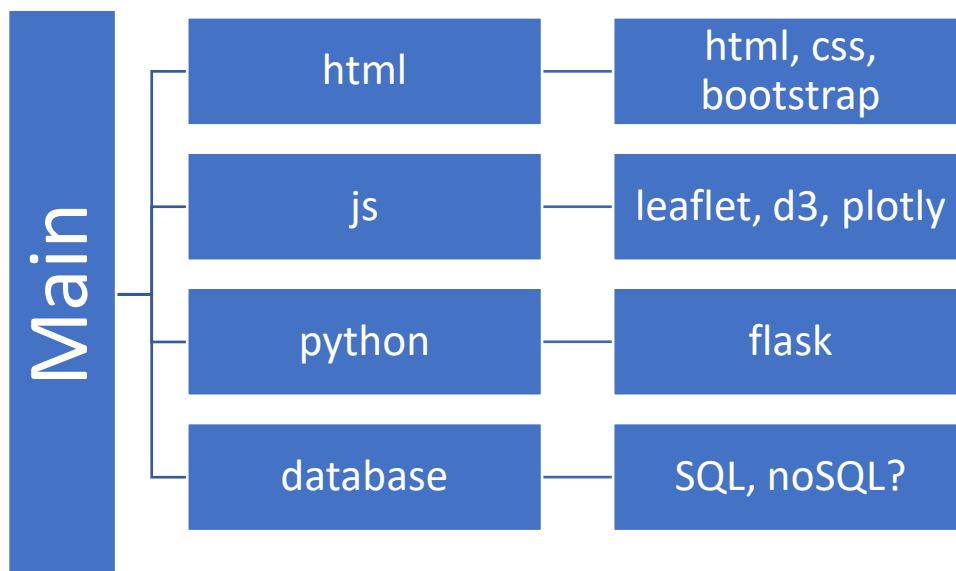

Cross plots to demonstrate that earthquakes
can't be predicted

- Magnitude vs Month
- Magnitude vs Lat
- Magnitude vs Lon
 - (?)

Databases

- <http://ds.iris.edu/seismon/index.phtml>
 - <https://www.usgs.gov/programs/earthquake-hazards/earthquakes>
 - <https://www.bosai.go.jp/e/>
 - <https://www.hinet.bosai.go.jp/>
 - <https://www.kaggle.com/usgs/earthquake-database>
 - <https://github.com/che0/countries>
 - DB population
 - DB country income
-
- If it's geojson leave it. If it's csv push to a db.

Considerations

- Split activities based on preferences/expertise?
- DB: Define tables
- Drop down menus? How interactive?
